PERSONAL PROJECTS

To do List (08/2024 - 09/2024)

- Build a responsive grocery list application that allows users to store, update, delete, and post grocery items efficiently.
- Implement functionality for storing items in external API, ensuring that the grocery list persists across sessions.
- Provide an option to delete items individually, with a confirmation prompt to avoid accidental deletions.
- Use React Hooks (useState, useEffect) to manage state for items, including adding, editing, and deleting.
- Add a posting feature where users can post their entire grocery list (or updates) to a backend API, allowing for synchronization across devices or sharing with others.
- Display real-time updates, reflecting changes immediately on the UI as items are added, updated, or deleted.
- Optimize performance by reducing unnecessary re-renders, especially when interacting with multiple items on the list.

Personal portfolio (07/2024 - 08/2024)

- Design a fully responsive layout for seamless viewing on desktops, tablets, and mobile devices.
- Introduce yourself with a professional homepage, personal tagline, and clear call to action.
- Highlight your background, skills, and experience in an engaging About section.
- Showcase your technical skills using icons, progress bars, or charts for visual clarity.
- Present key projects with detailed descriptions, tech stacks, and links to live demos or GitHub repositories.
- Implement a contact form and provide links to social media for easy communication and networking.
- Enhance user experience with smooth scrolling, intuitive navigation, and section transitions.

Pizza billing system (10/2023 - 12/2023)

- Develop a Windows-based desktop application using WinForms in .NET to streamline the pizza ordering and billing process.
- Facilitate efficient order management for small pizza outlets or restaurant chains by allowing users to input and modify pizza orders easily.
- Calculate pizza order totals, including taxes, discounts, and additional toppings or add-ons, with automated accuracy.
- Print detailed receipts that include order summaries, itemized prices, and total amounts for customers. Support a wide range of pizza customizations, including size options, toppings, and special instructions.
